Abstract: Cooperative Learning is teaching method in which students work in a small group to achieve a joint goal. This study aimed to investigate students’ perception toward Cooperative Learning in improving their ability to speak. This research employed qualitative research design. There were six (6) intermediate students in Progress English Course Center as participants in this research. Those participants were selected through purposive sampling technique. To gain the data, interview and students’ field diary were used. The result of both questionnaire and students’ field diary were positive, which means students showed a good response when teacher taught them by using Cooperative Learning. Students no longer felt anxious in speaking, they were not afraid anymore to express their idea, and they become an active participant in group discussion. This study concluded that students supported the use of Cooperative Learning on teaching speaking.

Keywords: Cooperative Learning, Speaking Ability

INTRODUCTION
Speaking skill is important to teach due to the large number of students who want to study English in order to be able to use English for communicative purposes. Richards and Renandya's ¹state that the large number of language learners in the world have a greatest increasing in learning English in order to develop proficiency in speaking. Moreover, the students of second foreign language education programs are considered successful if they can communicate effectively in the target language.

In the teaching of English, however, speaking skill is considered to be difficult one, and in order to be able to communicate effectively the learners are required to know its grammatical and semantic rules. Learners must also acquire the knowledge of how native speakers use the language in the context of structured-interpersonal exchange, in which many factors interact². Therefore, it is difficult for EFL learners to speak the target language fluently and appropriately.

As the ability to speak English is very complex task considering the nature of what is

involved in speaking, not all of the students in an EFL speaking class have the courage to speak. Sato (2003) found that the students of English were not highly competent in speaking because of their fear of making mistakes. The same finding was also shared by another research which conducted by Hua. She found that the students fail to join the English discussion because of their vocabulary problems and fear of making mistakes resulting in their inability to speak English well. In addition, she stated that the students felt English were stressful activity especially if they had to perform some class activities using English.

Many researchers had conducted a research to find out how students perceive when they taught by using Cooperative Learning especially in teaching speaking. Juhana found that students were enjoying the teaching and learning process when the teacher used CL in teaching speaking. The students’ psychological factors such as shyness, anxiety, lack of confidence and lack of motivation as the biggest obstacle for the students in speaking activity was coped with CL. This finding suggested that the teacher should be more aware on the use of CL to help students’ to overcome their hindrance to speak in English class. The teacher strategy also must be taken into account to build up the students’ ability in speaking, for instance the way of the teacher in stimulating and encouraging the students in learning English, moreover in learning activity the teacher was demanded to provide a good environment for the students in order they attained the target language, and the teacher should have enough knowledge or skill to be applied in the classroom, whereas speaking skill that includes vocabulary, pronunciation, and grammar were quite different from the students’ mother tongue.

Those findings above were open our eyes that speaking is not an easy task. It is not simply prompting the students’ involvement to interact with others, nevertheless recognizing how the students’ perceive when they wanted to speak were more valuable and inevitable. Therefore, this research carried out an issue to inquire dealing with the students’ perception on the implementation of Cooperative Learning in teaching speaking. This research did not investigate the students’ perception on speaking activity likes Juhana, Koichi Sato, and Jin Yan Hua did. Nonetheless, this study concerned to find out how the students’ perceive when they were taught speaking by using Cooperative Learning. In hope, this research led the teacher to provide an effective strategy to create competent speakers of English.

The reason why researcher applied CL instruction in speaking activity because it had been proclaimed as an effective instructional method in promoting linguistic development of learners of English as a social language. In line with Kagan, revealed that cooperative learning

---

provides students with the ability to socialize with others, in which they work together in small group to accomplish the joint goal, help each other to complete the task, the students perceive that they can achieve their learning goals if all the members of their group also attain their goals, and so much more. It may be contrasted with competitive learning in which the students work against each other to achieve an academic goal and individualistic learning where the students work by themselves to accomplish an academic goal and they do not cooperate with each other to get the goals.

As the great benefit of Cooperative Learning in language skill, the researcher attempted to find out students’ perception on CL, how the students perceive when their teacher applied CL in teaching speaking. An understanding of students’ perception will lead to the possibility of more effective teaching learning strategy. As revealed by Oxford to find an effective strategy in teaching speaking, students need to write down a note about what strategy of learning used and to describe their language strategies freely. When allowing students to clarifying their feeling on the course content for instance in speaking, the students can openly tell what they want, they obstacle they find in learning, and a lot of things. The teacher, therefore can give them feedback or help students to reduce the difficulties found. Interested in applying learning strategies, then it will lead to the employment of learning strategies in their whole activities. If the previous studies tend to focus on how the strategy can promote students’ speaking performance and also how this strategy correlate to the students’ speaking performance. Since it is also important to examine students’ perception, therefore this study is conducted to investigate how the students perceive the use of Cooperative Learning strategy.

**RESEARCH METHOD**

This research used qualitative research design which aimed to find out students’ perception on the implementation of Cooperative Learning in teaching speaking. As Hancock explains that in qualitative studies, the key concern is to understand the phenomenon of interest from the participants’ perspective, not the researchers’.

The participant in this study were six students whose age was around 16 years old. These respondents were taught speaking by using Cooperative Learning strategy for several meeting that had been organized by the researcher. In selecting the subject, the researcher applied purposive sampling technique. According to Sugiyono purposive sampling is the most common technique in qualitative research.

The researcher used two kinds of instrument, they were questionnaire and interview. The questionnaire was used to gain the students' perception toward Cooperative Learning on their speaking performance. Moreover, interview was used to clarify the information got in questionnaire.

In data collection, the researcher administered questionnare two times. First was at the

first meeting before the students were taught using Cooperative Learning, and the second was in the 7th meeting as the last meeting of the training. After collecting the result of students' questionnaire, interview was conducted. It was supposed to gather more in depth data about students' feeling and also to investigate more students' point of view that might be less or not covered in questionnaire. To make the participants were easier to share their idea about how the felt when the teacher taught them used Cooperative Learning, furthermore, they were permitted to use English or mix their language in English with Bahasa.

To analyze the data the researcher used three steps they were; Reading, Describing, and Classifying. First was reading, here the researcher read and write about all field note, transcript respondents comments to get an initial sense of the data. The second was describing, it involves developing comprehension scレーション of participants, setting, and the phenomenon being studied. The description were based on the collected observation, interview result, and field diary. The purpose of this step was to provide a narrative picture of the setting of an event that take place in it. The last was classifying, the purpose of this step was to categorize the data, to organize and to group the data into the theme.

RESULT AND DISCUSSION
The results of questionnaire have shown that the students seemed to support the CL in teaching particularly in speaking. It can be seen in the students' response below:

**Item Number 3**: Implementasi cooperative learning memudahkan saya untuk belajar berbicara Bahasa Inggris.

![Figure 19: The diagram of frequency of each scale for item number 3](image)

The data and the diagram showed that, the students mostly strongly agree with the statement that the implementation of cooperative learning make them easy in learning speaking. There were 4 (66,67%) students confirmed strongly agree and there were 2 (33,33%) students confirmed agree with the statement.

With respect to their feelings about CL, most of the students found this instruction good and useful for them. Regarding the usefulness of CL, all of the students agreed that teaching speaking through CL was useful for them in various ways. Most students thought that they were
being able to speak English well after the implementation of CL in teaching speaking, in which most of the students’ problem in speaking had been solved when they taught through cooperative learning.

In cooperative learning, the students not only affect in their ability to speak, but also the students obtain many ideas and information from other students. It found in the data below:

**Question 4**: Jika anda menyukai cara guru mengimplementasikan metode cooperative learning, pada bagian manakah yang anda sukai/senangi?

FL : Yang paling saya sukai kita dapat lebih akrab dengan teman dan memotivasi untuk belajar speaking dan saat membacakan topic dan teman-teman tertarik dengan topik saya.

JM : Ketika kita berdiskusi dengan teman tentang sesuatu hal sehingga sangat memotivasi kita untuk mengeluarkan pendapat dan berbicara dalam bahasa Inggris.

From two descriptions above, the students admitted that sharing opinion and idea from one another is the activity they like most in cooperative learning. It was because there was a process of exchanging information from each student in a group, therefore, they learn the assign material better before sharing it with other. This such a thing make the students become responsible to their own duty for the requirement to accomplish the joint task. As stated by Johnson & Johnson (1996, p 48) that in cooperative learning each individual team member is responsible for learning the material and also for helping the other members in the group.

After the students attended the teaching English through cooperative learning, all of them agreed that CL affected their ability to speak. It can be found in the data below:

**Question 6**: Apakah anda tertarik untuk belajar Speaking setelah guru mengajarkan Bahasa Inggris dengan menggunakan metode cooperative learning?

NI : Ya, bahkan sangat tertarik karena dengan cooperative learning banyak manfaat yang didapatkan seperti kepercayaan diri dan menambah kosakata dalam bahasa Inggris.

AF : Ya karena dengan guru mengajar dengan menggunakan metode itu, saya tidak merasa takut ataupun malu saat ditanya ataupun saat menjelaskan materi saya.

JM : Ya, karena dengan belajar bahasa inggris dengan menggunakan CL memotivasi kita untuk lebih aktif berbicara dan berpikir bersama jika ada hal yang kurang diketahui.

In the data above, the students admitted that they had a chance to learn and memorize a lot of new vocabularies when discussed or shared idea with their friend, the students became
more active in speaking because they were not afraid to make some mistakes when expressing the idea or opinion within the group, in addition, there were an increasingly friendship intimate among the students which made them feel relax and enjoy the class. This happened because the students had got social skill which was allowed them to mingle with other member in the group. In the current study, students’ positive feelings might derive from their learning experience through CL for several meetings.

To conclude, there were some points from the questionnaires were worth noting. The first was, the findings from the present study suggested that Teaching speaking using CL improve students’ ability in memorizing new vocabularies and it guided students to produce idea or opinion easily. Some activities in CL, such as interview each other and discussion made the students put their positive feelings towards the implementation of CL teaching Speaking. In conclusion, the finding indicated that teaching speaking through Cooperative Learning was responded positively by the students and the implementation was highly recommended.

CONCLUSION

This study concluded that there was a positive perception of students’ when they were taught speaking by using cooperative learning. The students found the beneficial of applying cooperative learning in their speaking, they, therefore, supported the application of this strategy. In addition, this research revealed that cooperative learning is a good teaching strategy to improve students’ speaking ability that helps the intermediate learners of EPCC to achieve the learning goal. Through cooperative learning, the students perceive that they were be able to communicate idea clearly, to be able to understand the idea of their friend easily, the students were able to interact with others in a group, etc.
